

From AI curiosity to a qualified learning pipeline

Goal: position the masterclass as a practical, low-friction entry point for professionals who want to apply AI at work - then convert demonstrated learning intent into paid-course demand.

01 GO-TO-MARKET PLAN

TARGET AUDIENCE - Core: 25-45 year-old managers and functional leads in marketing, sales, finance, HR, operations and consulting. - Need state: high AI interest, low confidence; wants immediate productivity gains without coding. - Secondary: founders, analysts and career switchers; enterprise L&D teams for group participation. Positioning: "Three hours to build an AI workflow you can use on Monday."	PRIORITY CHANNELS - Owned: ET site/app inventory, newsletters, push, WhatsApp and CRM email - highest trust and lowest CAC. - Professional: LinkedIn creator clips, speaker posts, lead-gen ads and alumni advocacy. - Partners: employers, business schools, professional associations and SaaS communities. - Intent capture: Google Search plus retargeting for page visitors and video viewers.
CREATIVE REGISTRATION IDEA	The AI Workday Challenge: a 3-minute diagnostic asks users where they lose time (meetings, research, reporting, email). It returns a personalized "hours-back" score and a shareable card, then reserves a masterclass seat with one click. The session demonstrates workflows mapped to the top scores; referrals unlock a prompt pack.

02 PRODUCT THINKING: FUNNEL DIAGNOSIS

5,000 REGISTERED Top of funnel	2,000 ATTENDED 40% show-up	150 PURCHASED 7.5% of attendees	3.0% END-TO-END Registrant to paid
STAGE	WHAT MAY BE HAPPENING	HOW I WOULD VALIDATE IT	
Registration -> attendance	Free sign-up creates weak commitment; timing conflicts; reminder fatigue or poor deliverability; timezone/device friction; promise is too broad; competing events.	Cohorts by source, role and lead time; reminder open/click rates; calendar-add rate; no-show pulse survey; join failure logs.	
Attendance -> engagement	Content is generic, too theoretical or too long; slow opening; weak speaker fit; insufficient interactivity; early pitch reduces trust.	Minute-level retention; poll/chat participation; workflow completion; question themes; content usefulness score.	
Engagement -> paid	Course value, outcomes or differentiation are unclear; price shock; weak urgency; no manager buy-in; checkout friction; offer is not matched to intent.	Offer-view and checkout funnel; objections survey; conversions by engagement signal; payment errors; 24-hour assisted-conversion calls.	

Improve the funnel with evidence, not guesswork

03 METRICS I WOULD TRACK

Acquisition quality Reach -> landing-page CTR -> registration CVR CAC / cost per qualified registration; source, role and company-size mix; referral rate.	Attendance & activation Calendar-add rate; reminder engagement; show-up rate Join success; first 15-minute retention; 60/120/180-minute retention; workflow completion.
Learning & satisfaction Poll/chat participation; questions per attendee Usefulness score; confidence lift (pre vs post); CSAT/NPS; replay and prompt-kit usage.	Commercial outcomes Offer-view -> checkout -> payment conversion Attendee-to-paid and registrant-to-paid; time-to-buy; revenue/CAC; refund rate; paid-course activation.

DECISION DASHBOARD

North star: paid-course activations per 1,000 qualified registrations. Guardrails: CAC, attendee satisfaction, refunds and unsubscribe rate. Every metric is cut by source, persona, device and registration lead time to avoid misleading averages.

04 FIVE PRIORITIZED IMPROVEMENTS

#	IMPROVEMENT & HYPOTHESIS	EXPERIMENT	PRIMARY SUCCESS METRIC
1	Intent-based onboarding. Capture role, use case and goal; personalize examples and messages.	Personalized vs generic journey by persona.	Show-up rate; +5 pp target.
2	Commitment loop. Calendar hold, WhatsApp opt-in and a 5-minute pre-work task used live.	Pre-work + 3-touch cadence vs reminders only.	Attendance among completers; +10 pp.
3	Design for activation. Open with a result in 10 minutes; use role-based demos, polls and a downloadable workflow.	Interactive agenda vs lecture format.	120-minute retention; workflow completion.
4	Make value tangible. Show syllabus, instructor proof, learner outcomes, ROI calculator and a precise course fit/no-fit.	Outcome-led offer page vs feature-led pitch.	Offer view -> checkout; +20% relative.
5	Segmented conversion window. 48-hour bonus (office hours / prompt kit), replay clips and objection-based follow-ups.	Behavior-triggered sequence vs same email for all.	Attendee -> paid; 7.5% to 10%.

05 AI TOOLS & WORKFLOW

TOOL USED	OpenAI Codex (GPT-5) for structured ideation, funnel critique, concise editing and programmatic PDF production. Chosen for fast iteration across product, GTM and communication tasks while retaining an auditable draft.
HOW IT HELPED	It stress-tested stage-specific hypotheses, converted ideas into measurable experiments and compressed the answer to two pages. I selected the audience, priorities, targets and final recommendations; the AI accelerated synthesis rather than making the decisions.

PROMPTS USED (EXCERPTS)

- "Diagnose a 5,000 -> 2,000 -> 150 masterclass funnel by stage. Separate hypotheses from evidence and propose validation metrics."
- "Generate five experiments across attendance, engagement and purchase. For each, state the barrier, intervention and primary metric; avoid generic advice."
